

Deputy CTO (f/m/x)

At Tucan, we are thinking about the way information is handled anew. We develop innovative work processes with AI-supported applications that go far beyond conventional solutions. Our specialised modules, such as the Meeting and Legal module, offer flexible and efficient support in various areas of work.

Our vision: A "second brain" for organisations that takes over and automates documentation- and analysis-intensive tasks so that our users can focus on the essentials.

Since our foundation in 2020, we have successfully established ourselves and are ready to expand across Europe. Join our young, dynamic team and shape the future of work with us!

We are looking for a Deputy CTO to bring our product to the next level. You will ...

- evaluate, take charge and improve our existing implementation and [stack](#);
- create new state-of-the-art services to enhance our software;
- and find amazing solutions for challenges that'll pop up.

We always enable you to try out new and different technologies and frameworks.

You'll be working closely with our CTO, Michael, and also work as part of our wider product team.

You may be a fit for this role if you...

- have worked with TypeScript and have expertise in this field;
- know technologies like TypeScript, NestJS, NextJS, TensorFlow, openGPT, Mistral, Redis, Postgres, Rust, Python, Kubernetes, Traffic, and S3;
- are interested in new technologies without losing the scope for the big picture;
- your interest ranges from frontend, backend, infrastructure to machine learning;
- think entrepreneurial, are capable and willing to take ownership and responsibility for your tasks (we believe in confident and independent people);
- want to put your ideas into practical implementation;
- have experience leading a team;
- like to build the initial groundwork for new services;
- like designing, improving and managing complex systems.
- speak English and German fluently and can converse on complex topics in both.

A plus would be: start-up experience, willingness to share your knowledge and build a capable team. You can find our tech stack [here](#).

Talented Tech Leaders can work anywhere, so why choose us?

- You will be able to shape a promising start-up with your ideas early on.
- You have the opportunity to become recognised as one of the leaders in our field through playing a key role in the future growth of our company.
- You will be part of a highly motivated team of experts in their respective fields who all believe in a new way of working together: Informal, non-hierarchical, non-political, sociable work environment with lots of autonomy and independence.
- Gain first-hand experience of how to grow, market and build next level AI applications with an experienced team that is fascinated by their topic.

- We believe in effective and data driven work to achieve goals quickly and efficiently and value accomplishment and your personal time more than constant presence and "attendance rates".
- It is our job to be flexible and create a place for you to get into your perfect flow. This also means that we are happy to give you access to the amount of vacation days that work for you to have a balanced life.
- Join a network of experts who support us

If you are interested in our current tech, have a look [here](#).

Did we make you curious? Amazing! We are looking forward to receiving your application and current CV at jobs@tucan.ai! We are excited to hear from you!
